

**On-hold Phone Script** (for physician's offices)

At [insert physician's office name], we pride ourselves in offering the latest treatments and newest procedures. With that in mind, we are pleased to announce we are now offering KYBELLA® (deoxycholic acid) injection 10 mg/mL, the first and only FDA- approved injectable treatment used in adults to improve the appearance and profile of moderate to severe fat below the chin (submental fat), also called "double chin."<sup>1</sup> KYBELLA® can cause serious side effects, including nerve injury in the jaw (which can cause an uneven smile or facial muscle weakness) and trouble swallowing. The most common side effects include swelling, bruising, pain, numbness, redness, and areas of hardness in the treatment area. Ask your doctor or visit [mykybella.com](http://mykybella.com) for full prescribing information.<sup>1</sup>

Talk to your doctor [or if only one doctor at practice, "Dr. X"] to find out if this non-surgical treatment is right for you.

<sup>1</sup>KYBELLA® Product Label, 2015
